ANYKEY®

ABOUT US

effeff UNDER THE UMBRELLA OF ASSA ABLOY SICHERHEITSTECHNIK

Whatever you want to secure, protect, maintain - effeff has the technology you require.

Breaking new grounds, implementing new technologies, developing new ideas. Founded in 1936, the company effeff based in Albstadt became the market leader in the field of door control systems by following a consistent strategy.

After starting the electric strike production in 1947, a comprehensive product range has been gradually developed, which enables effeff to offer suitable solutions for every door.

February 1st, 2000, effeff joined the ASSA ALBOY Group based in Stockholm, Sweden and merged at the beginning of 2005 with IKON GmbH Präzisionstechnik, Berlin who also belong to the group to become ASSA ABLOY Sicherheitstechnik GmbH.

The Ritz-Carlton, Wolfsburg

Hamburg Airport

IKON and effeff, both renowned and well-established brands within the market remain under ASSA ABLOY Sicherheitstechnik GmbH as do the production sites of Berlin and Albstadt and the plant in Heiligenhaus. ASSA ABLOY is the leading manufacturer and supplier of mechanical and electromechanical locks and related products worldwide. Our customers benefit from the extensive know-how of the largest international group of companies, meeting every requirement in terms of total security and comfort throughout the world.

PERFORMANCE FEATURES

A fitting with ideal measurements:

- For wooden and metal doors
- ► Only 35 mm wide
- ► Backsets from 35 to 100 mm
- Suitable for all common square pin versions
- Door leaf thickness 38 to 85 mm

The latest trend in security.

Security technology today comprises not just a wealth of innovative functions. Access control technology is no longer marketed merely on the basis of cutting edge technology. Compliance with important standards and test requirements guarantee added security in the event of danger while at the same time meeting the stringent requirements of insurance companies. Design and product flexibility enabling virtually any requirement to be met as a standard solution play an everincreasing role. ANYKEY® is unrivalled and innovative in every respect.

More than just standard.

ANYKEY® is the standard record holder in terms of security fittings. It is the only access control worldwide that complies not only with intrusion protection device DIN EN 1906, protection class 2 and DIN 18257 but also DIN EN 179 for use in emergency exits and DIN 18273 for use on fire rated doors. As far as certified security is concerned, ANYKEY® is anything but standard.

Fire protection to order.

All ANYKEY® fittings with an order number beginning with the numerical sequence "497...", comply with DIN 18273 and are thus suitable for fire barriers. The order numbers of versions that are not suitable for fire barriers begin with the numerical sequence "496...".

Slim and stylish.

Only 35 mm wide, the stylish stainless steel security fitting is currently one of the slimmest on the market. This attractive design gives it not only a unique appearance but renders it highly adaptable: ANYKEY® can be used in virtually all doors and fits all common square pin versions and backsets. The exclusive, timeless optics are complemented by the handle or thumbturn and stainless steel decorative cover.

PERFORMANCE FEATURES

ANYKEY®

State-of-the-art security technology.

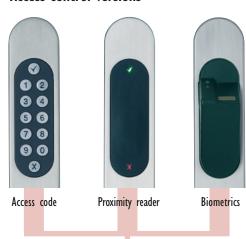

The secret of ANYKEY® is its ingenious technology providing increased security and intrusion protection combined with its ability to meet specific customer requirements. ANYKEY® is available in different versions:

- I. Access code
- 2. Proximity reader
- 3. Biometrics

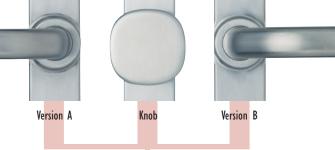

All security-relevant elements are integrated in the internal fitting on the inside of the door leaf and are therefore tamper proof. Transmission of data from the outside to the inside is coded. The decision-making electronics are also integrated in the fitting inaccessible from the outside.

Combined security.

Access control versions

Handles (stainless steel)

Alternative opening possibilities.

ANYKEY® can also be equipped (optional) with a locking cylinder with or without a core extraction protector (Protection Class 2 only for version with core extraction protector) or with an emergency power contact. This enables the fitting to be supplied with sufficient power via a conventional 9V block battery so that it can continue to function in the event of a current failure. The fitting then has alternative opening possibilities and can be integrated in an existing locking system or used with a master or fire brigade key.

Cylinders

European profile cylinder with core extraction protector

European profile cylinder

INGENIOUS

ANYKEY®

Security fitting with many extras and options.

The external fitting is available with either a cranked handle or with a thumbturn of easy-to-care stainless steel and is protected by a clutch with a protection against overturning in case of vandalism. In the event of missing access rights or applied force, the handles "free wheel". This means the handle or thumbturn can be either turned or pressed down when force is applied without the door actually opening. Decorative covers can also be ordered that not only conceal traces of previously mounted fittings but also offer an additional protection against drilling.

Outstanding technical know-how.

The functions of ANYKEY® have all been given thorough consideration, for example, the fitting automatically saves energy. The proximity/inductive reader and biometric versions are equipped with a sensor that functions when a person approaches. The access code version is activated by a button. This saves the life of the 4 Mignon power supply batteries that supply ANYKEY® with current. A light in the inside and outside area indicates when the batteries require replacing.

A true all-rounder.

ANYKEY® is versatile and adaptable. You can select from a wide range of handles and thumbturns. Mandrel dimensions of 35 to 100 mm and a width of just 35 mm enable these units to be installed in all the most common tubular frames and full-size doors. Another option is to fit a robust stainless steel decorative cover.

Ideal for self-locking security locks.

ANYKEY® is highly suitable for combining with self-locking security locks, e.g. effeff locks type 309x or 409x. These locks automatically lock a door as soon as it is closed. This means that ANYKEY® also eliminates possible disputes with the insurance companies requiring appropriate evidence in the event of intrusion despite the high degree of security. In order to achieve compliance with resistance class WK 2 as per DIN V ENV 1627 for the entire door element in metal doors, we recommend the effeff multi-point locking system 319.

Ideal for retro-fitting.

ANYKEY® can be used in new builds and, equipped with an additional decorative cover, in renovation projects. This decorative cover not only covers all drill holes: it also provides additional protection.

Excellent qualities

- ► Protection against overturning and vandalism
- ► Data coding, access control integrated in the fitting, inaccessible from the outside
- Locking state display
- Optional additional equipment locking cylinder or emergency power contact
- ► Ideal in combination with self-locking security locks
- Power supply: 4 batteries Type AA
- Integrated battery status display
- ► Sleep/wake-up mode

OUTSTANDING TECHNICAL KNOW-HOW

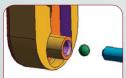

ANYKEY® DETAILS

Solid stainless steel external cover plate (15mm)

Extra slim design (35 mm)

IP 54 suitable for external use

Drilling protection with ball bearing (bolt)

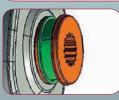

Protection against

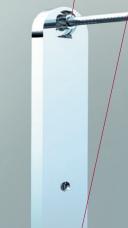

Access control module (code, proximity, biometrics)

Sturdy handle with needle bearings

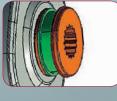

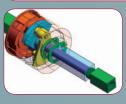

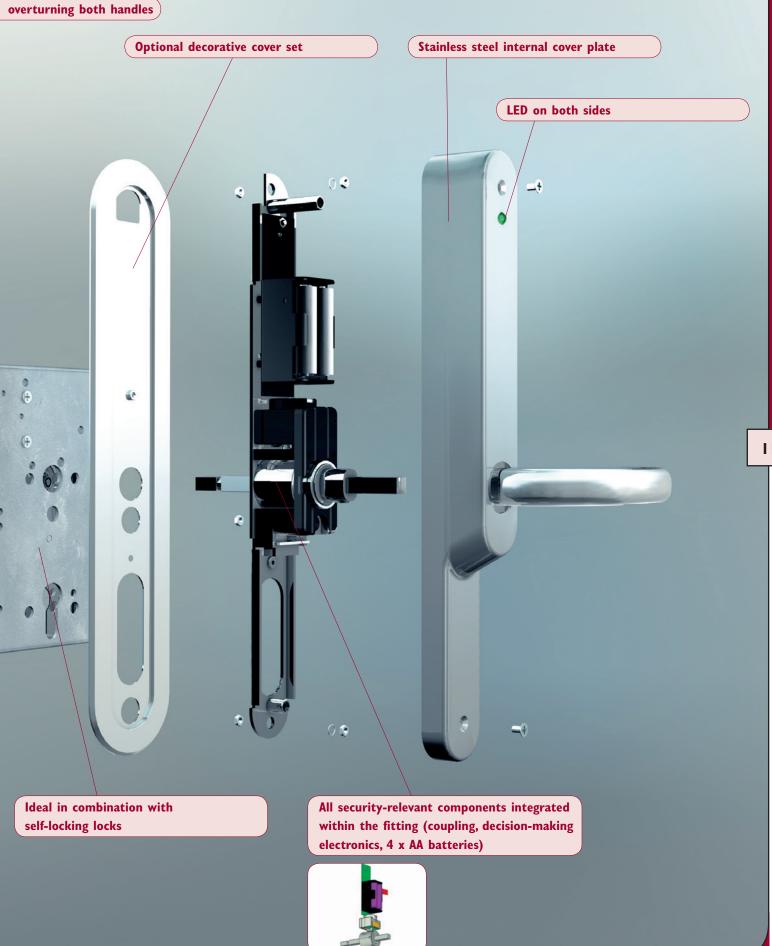

Optional European profile cylinder with core extraction protector

The access code version of ANYKEY® is the ideal solution for applications requiring increased security. Designed for three to eight digit codes thus enabling a maximum of 100 million potential codes. If the codes are changed regularly, successful manipulation is virtually impossible.

An automatic security lock, optional use of a locking cylinder with core extraction protector or the emergency power contact together with the solid stainless steel decorative cover, make this version of ANYKEY® an impregnable stronghold against intruders. ANYKEY® is a true insiders' tip as far as security is concerned.

ACCESS CODE

ANYKEY®

The unique security fitting – tested and approved

All versions of ANYKEY® comply with the most important security standards. At the present time no other fitting on the market can compete with the ANYKEY® security fitting with integrated access control that not only provides an effective safeguard against intrusion (DIN EN 1906, Protection Class 2 and

DIN 18257) but is also suitable for fire and smoke protection (DIN 18273) and emergency exits (DIN EN 179). This means guaranteed more security for trade, security professionals and

ANYKEY® ACCESS CODE version

- ► Secure access control
- ► Between 1000 (3-digit) and 100 million (8-digit) codes
- ► Can be programmed directly at the fitting
- ► Stand-alone device
- ► Battery-operated (4 x Type AA)
- No additional cables
- ► Protection class IP 54: External cover plate suitable for external doors, Protection Class IP 30: Internal cover plate
- Code management via program code
- ▶ Up to 39 codes
- Deletion of all codes or individual deletion via codes or account
- ► Temporary or permanent release
- ► Individually programmable authorization for permanent release per code
- ▶ Dead bolt monitoring with LED
- \blacktriangleright Operating temperature range external cover plate -10 to +60 °C internal cover plate 0 to +60 °C
- ▶ Battery service life approx. 2 years or approx. 36 000 cycles

Key to order numbers

ANYKEY®

Comfortable security.

Access control with proximity/inductive data carriers has a variety of uses, for example the transponder chip that enables proximity/inductive detection of access rights from a distance of just a few centimetres can be integrated in different data carriers. This highly comfortable form of access control is ideal where relatively large numbers of people require easy access and buildings are highly frequented despite high security

User card

Coded, proximity/inductive

Type 470-5-1, Order no.

470-5-I-EMI-I00

Key fob

Coded, proximity/inductive

Type 470-5-2, Order no.

470-5-2-EM2--00

ANYKEY®

Cost-conscious and absolutely secure.

The superiority of ANYKEY® over conventional fittings is due to the fact that there are no non-registered copies. If a data carrier (card, clip, etc.) gets lost, it is simply deleted from the program preventing misuse. There are no security risks with ANYKEY®.

ANYKEY® proximity/inductive reader version

- ► Easy access control
- Data carriers: Card, key fob
- ► Reading distance ≤ 5 cm
- ► Can be programmed directly at the fitting
- ► Stand-alone device
- ► Battery-operated (4 x Type AA)
- ► No additional cables
- ► Protection class IP 54: External cover plate suitable for external doors, Protection Class IP 30: Internal cover plate
- ► Management via programming card
- ▶ Up to 30 data carriers
- ► Temporary or permanent release
- ▶ Dead bolt monitoring with LED
- ► EM 4102 coding
- ightharpoonup Operating temperature range external cover plate -10 to +60 °C internal cover plate 0 to +60 °C

The personalized form of security.

No two humans in the world have identical papillary lines on their finger tips — not even identical twins. The papillary lines are formed during embryonic development. The biometric version of ANYKEY® exploits this fact. For security reasons, several fingers of each authorized person can be scanned.

This is particularly helpful if it is impossible to identify a finger due to injury. Identification takes place by moving the finger across the reading surface on the outside of the fitting.

Quick and handy.

The biometric version is an excellent solution for doors. Users don't have to remember codes or carry data cards with them. Their data carrier, namely their fingers accompany them all the time. Access control with this ANYKEY® version is not only practical but also quick and simple.

ANYKEY®

BIOMETRICS

The personal aspect of security.

This form of access control employs biological features and constitutes the very latest in terms of security technology. The advantage it offers is that no-one can forget to bring their own fingers, nor can anyone falsify papillary lines. The biometry laser is able to identify any of several fingertips from each authorized person. This truly is the fingertip guide to security! This biometry version is ideal for users who have difficulty remembering codes, and for people who object to carrying personal forms of ID with them.

ANYKEY® biometry variant

- ► Simple access control
- ► Identification by fingerprint
- ► Can be programmed directly on panel
- ► Standalone device
- ► Battery-operated (4 x type AA)
- ► No additional wiring required
- Type of protection on outer panel: IP 30 / on inner panel: IP 20
- Managed on the Master principle (simple, reliable administration)
- ► Up to 50 people (several fingers per person can be read)
- ► Temporary or permanent access approval
- Authorization for permanent access approval can be programmed separately for each finger
- Deadlock monitoring with LED display
- \blacktriangleright Operating temperature range external cover plate -10 to +60 °C internal cover plate 0 to +60 °C
- ► Battery service life approx. I year or approx. 15 000 cycles

DECORATIVE COVER

ANYKEY®

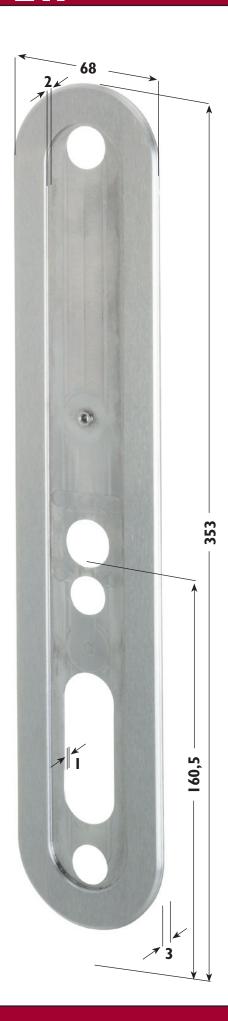

Ready for all.

Due to the solid decorative cover, ANYKEY® is a fitting for all eventualities — renovation or conversion. The decorative cover set comprising 2 plates for internal and external use (2 x 1 mm in addition to the door leaf thickness), can hide unsightly, old holes of previously mounted fittings. For wooden and steel doors, the decorative covers have a wider appearance and provide an additional intrusion protection.

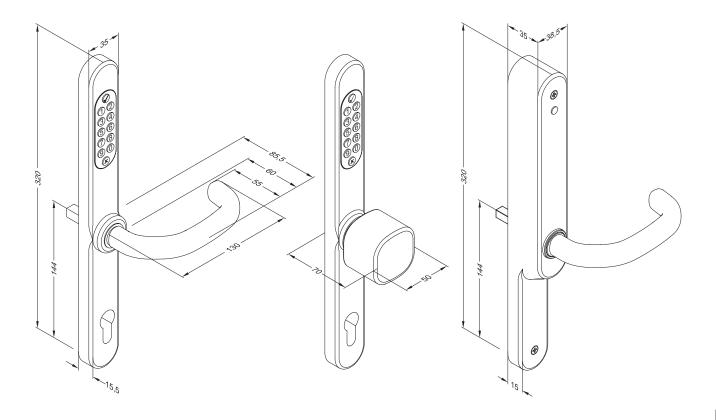

Decorative cover set, Order no.

496-1080050--35

ASSEMBLY TO MEASURE

ANYKEY®

Safety distance between handle and finisher frame

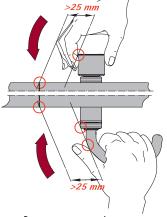

To prevent injuries to the hands when opening/closing the door and to assure good ease of operation, a safety distance between handle and finisher frame is required. This must be at least

25 mm (GUV-V S1)*. The distance between finisher frame and door handle or thumbturn is influenced by four factors: mandrel dimension, profile geometry, door leaf width and hinge position.

These factors must therefore be taken into account in setting a safety distance during assembly work.

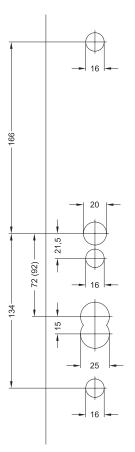

*GUV: German Rules for Health & Safety at Work and Accident Prevention

Door opens inwards, with thumbturn

Door opens outwards

effeff, established in 1936 as a precision engineering and electrical engineering workshop, has developed through a consistent product policy to become the global market leader in electromechanical locking device technology. Electrical door releases, electrical bolts, security locks, access control systems, electro holding magnets, rescue route technology, Swing door operator, automatic arrester systems and control elements are among the products that effeff, based in Albstadt on the Swabian Alb, Germany, exports today to 75 countries around the globe.

IKON, established in 1926 as ZEISS IKON
AG, is one of the leading brands for locking
cylinders, locks and locking systems in
Germany. Our products and solutions are
manufactured to state-of-the-art technological
standards and also include (for some time
now) mechatronic locking cylinders, escape
door technology, door fittings and door closing
mechanisms, along with numerous auxiliary
locks and securing devices.

They protect both people and valuables.

ASSA ABLOY Sicherheitstechnik

GmbH. The IKON and effeff brands have been developed, produced and marketed in a joint company since 2005, with both ranges perfectly complimenting each other. This enables us to offer our customers comprehensive and complex system solutions for private, commercial and public service applications.

ASSA ABLOY is the world's leading manufacturer and supplier of locking system solutions and security systems, meeting the high demands of customers for security, protection and user-friendliness. With around 30.000 employees, the group generates an annual turnover of approximately 3 thousand million Euro.
